Go Wireless

Infobit iShare universal USB-A, HDMI and USB Type C dongles avoid the unsightly jumble of cables and adaptors. It creates clean, tidy and comfortable meeting room without any additional adaptors or rummage under the table. Go wireless, you'll spend less time setting - up and more productive and effective.

Instant Show / Hide

Frequently, users want to temporarily
hide the screen from the mass
or due to privacy.

iShare allows you to hide your projection
by only single click on the dongle
instantly and show it with
another simple click.

No Software Installation

iShare couldn't be easier. Plug the dongle into your laptop, wait a few
seconds for it to establish connection with the receiver box connected with your
display via HDMI, and press on the dongle to start present. No connecting to Wi-Fi is
needed with this plug and play feature.

Guest Friendly

iShare works for everyone including visitors that show up in your office for the first time. As there's no need to install any software or ask your company's Wi-Fi password, meetings start and end on time by the so easy click-and-present way.

Multiple Users

iShare frees everyone to share what's on their device, on the same display, simultaneously. Anyone can connect with one click and present straight away. Just walk into any meeting room and share what you want to, no matter which device it's on- no cable switching and no set-up procedure.

Multiview

Physical cable connection allows only one user projection from one device at a time. iShare supports single view, 1x2 split view or 2x2 quad-view. Supports up to 16x input sources connected simultaneously.

Touch Back Control

With the interactive display or whiteboard, you can control your source PC/Mac by manipulating or annotating without any cable connected or walking back to your seat.

A LOOK AT THE MOBILE-POLITICAL LANDSCAPE

88% of Americans own a mobile phone   (That's more than **274 million** people.)

53% of all mobile phone users have smartphones   (That's more than **145 million** people.)

Separated Audio

What if your display does NOT have built-in speaker? iShare receiver box provides 3.5mm separated audio output to connect your standalone speaker/ Sound Bar.

Android Casting with Audio

iShare is the first in this industry to support casting video and audio together from Android devices (conventionally, only iOS devices with audio).

4K UHD 60Hz

iShare receiver supports up to 4K60Hz (iShare 200, 400 series) via HDMI connection to the display.
The dongle supports up to 1080p/60Hz and a latency of 70 to 100ms (or 0.07 to 0.1s).
Note: 60Hz under Windows 10

Dual-WiFi

What if you want to use internet when casting your mobile device which is connecting the meeting room Wi-Fi without Internet? iShare is the first in this industry to support Dual-WiFi technology that allows you to visit the Internet while casting or show online contents.

Landscape or Portrait

iShare supports both landscape and portrait display installation. It supports 0, 90, 180 and 270 degrees image rotation which allows you to present your mobile device in full screen without any stretch.

Cross - Platform

iShare works on any PC or Mac, but what if you want to project content from your mobile devices? It supports AirPlay and Miracast technologies built in to project your any content.
